

Installation of 6 m Element

The 6 m element is mounted below the boom under the blue-black element ELEMENT-1A. See drawing "6 m Element".

Insert the element tubes as shown.

The given element length is typical for $52 \pm$ MHz center frequency.

Tuning: Shortened element tubes = higher frequency
 Lengthened element tubes = lower frequency

± 1 MHz = $\pm 1 \frac{1}{4}$ " or 3 cm
